

Transformer for leading energy technology firm

OVERVIEW

Location	Solution	Project date
North Italy	50 MVA transformer	2024

DESIGN AND BUILD OF A 50MVA TRANSFORMER FOR LEADING GERMAN ENERGY TECHNOLOGY FIRM.

The project involved the experienced engineering team at Co.Bo.T analysing the drawings supplied by the client to build, test and deliver a transformer to the client's exact requirements.

With client satisfaction a priority, the Co.Bo.T team took a proactive approach, involving the client regularly throughout the build process to ensure they were happy with the quality and that the finished product reflected the initial designs their team had supplied.

As a result of Co.Bo.T's proactive approach, the client was happy with the unit and took delivery of the transformer, marking completion of the project. The successful delivery of the project has since lead to repeat business for the Co.Bo.T team.
